

Duplex Receptacle Plate and Wireport™ with Grommet

NEW!

The new Duplex Receptacle and Wireport™ with Grommet offers the CE Professional the flexibility to consolidate a standard duplex receptacle into a 1 gang Wireport™ plate for an even cleaner experience and better in wall cable pass through look. Locate this combination next your home theater equipment, ceiling projector, Bose Subwoofer Power Module, and in small office environments where your network gear receives CAT5e/CAT6 Cabling.

The grommet insert only opens where cabling is present and maintains a closed area leaving an aesthetically clean appearance. Just one cable or multiple cables will look equally presentable. Cables behind the wall can be fed from either the floor up or the ceiling down with ease. The Wireport™ eliminates the need for plate connectors and provides a clean professional appearance to your custom installation. Mounts directly to a dual voltage electrical box. Plate is MID-Sized™ to cover imperfections in and around the sheet rock area of the dual voltage electrical box.
