

Wireport™ Plates with Grommet

The new Wireport™ plate with Grommet is the preferred choice in applications where cables exit the wall and are exposed to the viewer! The grommet insert only opens where cabling is present and maintains a closed area leaving an aesthetically clean appearance. Just one cable or multiple cables will look equally presentable. Cables behind the wall can be fed from either the floor up or the ceiling down with ease.

The Wireport™ plate eliminates the need for plate connectors and provides a clean professional appearance to your custom installation. They are designed to mount directly to standard low voltage mounting brackets and backless boxes. By eliminating the connectors at the wall, the installer reduces labor and material costs and improves signal integrity thereby making your installations more competitive and reliable. Wireport™ plates are perfect for installations of audio, video, security, and office networking.

Grommets are sold with the Wireport™ plate in master packs of 25 or separately in master packs of 25. They are available in industry standard colors of White, Almond, Ivory, Brown, and Black.
